AUTOMATION

MORIN ACTUATOR DESCRIPTION:

The Morin Actuator is a heavy-duty, quarter-turn scotch yoke piston design available in ductile iron/carbon steel, ductile iron/ stainless steel and all stainless steel through 238,000 in. Ibs. of torque. It is available as double acting (air-to-air) and spring return (fail-safe). Available accessories include:

- solenoid valves, positioners, filter/regulator/lubricators
- partial stroke test device
- lockout device
- jackscrew, hydraulic overrides
- AWWA tested per C504 for water or pneumatic service

WATER INDUSTRY APPLICATIONS

- filter galleries
- pump control/isolation
- submersible
- fail-safe isolation

AUMA SA/GS Quarter-turn Electric Actuator Application: Used to operate larger quarter-turn valves

AUMA SG Quarter-turn Electric Actuator Application: Used to operate smaller quarter-turn valves

Electric motor actuators can be furnished when required. Quarter-turn actuators are available for butterfly and eccentric plug valves. Multi-turn actuators are available for resilient wedges and double disc gate valves.

All actuators contain the following standard accessories: a handwheel for manual operation, open and close position limit switches to assure motor shut-off at the ends of travel, open and close torque limit switches to protect the valve from excessive actuator torque and a separate drive nut or coupling. The motors have been designed for high starting torque and long service life. Quarter-turn actuators are furnished with adjustable end of position mechanical stops.

Optional accessories include intermediate position limit switches, position feedback devices and integral motor controls. Generally, motor controls consist of reversing starters, control transformer, push buttons, selector switches and indicating lights. For these applications requiring control by an analog signal (usually 4-20 mADC), a positioner can be furnished with motor controls.

M&H FLOOR TYPE PRESSURE RELIEF VALVES

PRESSURE:

The cover for the Pressure Relief Valve weighs approximately 6 lbs. and starts to open at a head of approximately 9" of water.

INSTALLATION:

In order for the F-1493T Floor Type Valve to operate correctly, it must be installed in a vertical position.

Length can be increased to desired dimension by adding PVC or Ductile pipe into bell.

SIZE RANGE WORKING PRESSURE SUGGESTED SPECIFICATIONS **M&H VALVE PRESSURE RELIEF VALVES----"FLOOR TYPE" STYLE F-1493**

Body Length- Inches	4" x 8"	6" x 8"
Weight Complete - Pounds	30	42

WORKING PRESSURE
The valve starts to open at a head of approximately 9" of water.

SUGGESTED SPECIFICATIONS:

Floor type hydrostatic pressure relief valve shall be designed for installing in the bottom of concrete tanks.

The assembly shall consist of three parts: cover, body and grate. All three parts shall be of cast iron conforming to ASTM specifications A-126 Class B. They shall be designed so that neither the cover nor grate can become separated from the body of the valve, due to ground water pressure around the tank. However, when necessary, both may be easily removed by turning them to right or left to free them from locking lugs cast integrally on the inside of the body.

The seats shall be of BUNA-N rubber, bonded to the cover, mating with a machined bronze seat in the body.

Floor type pressure relief valves shall be as furnished by M&H Valve (Style F-1493) or approved equal.

July 2005 / M&H Pressure Relief Valves—Floor Type

INSTALLATION OPERATION MAINTENANCE M&H VALVE PRESSURE RELIEF VALVES----''FLOOR TYPE'' STYLE F-1493

General Inspect all assemblies at time of delivery for shipping damage and to confirm compliance with order. The valve should be protected from rough handling. Water and debris should not be allowed to collect in valve.

I. Installation

- A. Check that valve end joints are clean
- B. Remove any material used to restrain the gate during shipment and storage.
- C. The cover should be checked to insure freedom of motion and proper operation.
- D. The valve should be installed over a bed of crushed stone.
- E. The valve must be installed in the vertical position to operate properly.

II. Operations

Once installed, the valve will operate as pressure conditions dictate. When outside water pressure builds up. Exceeding the inside pressure, the valve will open and allow water to enter the tank to equalize pressure. When the pressure is relieved, the valve will close to prevent seepage of liquid out into the ground.

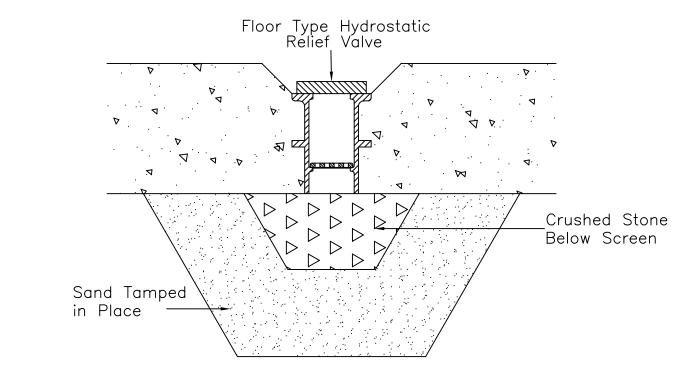

III. Maintenance

Frequency of inspection should be at least on an annual basis, or whenever valve is accessible. Remove the cover by turning it right or left and lifting out. Examine and clean seating surfaces. Remove any debris from inside of body. Remove and clean grate if necessary. Reassemble and insure proper operation and retention of cover.

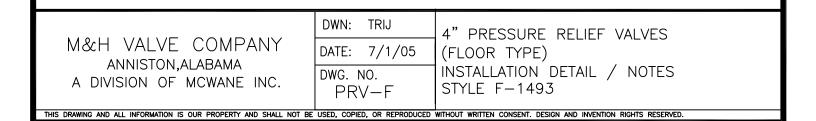

Note:

There are no recommended spare parts There are no lubrication requirements.

July 2005 / M&H Pressure Relief Valves—Floor Type

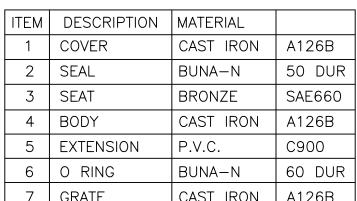

- NOTE 1: A rubber (Buna-N) To metal seal is accomplished when the cover is in the closed position, metal face is a machined bronze seat.
- NOTE 2: Ground water pressure cannot separate cover or grate from body.
- NOTE 3: Cover and grate can be removed by turning to right or left and lifting out. NOTE 4: Valve starts to open at a head of approximately 9" of water
- NOTE 5: In order for the F-1493 "Floor Type Valve" to operate correctly, it must be installed in a vertical position.
- NOTE 6: The 8" long cast iron body is designed to be extended to any length by using C900 PVC pipe and field cutting to desired length.

Working Pressure

Valves unseat and swing open under unseating pressure to release the outfall fluid and close when pressure is relieved.

Accessories / Options:

4" & 6" F-1496-T Wall Pipe with Grate

SUGGESTED SPECIFICATIONS:

The wall type hydrostatic pressure relief valve shall be suitable for sidewall installation in tanks and digesters.

The valve shall be of the 1.0degree seat design with offset single pivoted hinge.

The flap gate and body shall be of cast iron conforming to ASTM specifications A-126 Class B.

The body seat ring and hinge pin shall be furnished of bronze.

The gate shall have a neoprene rubber seat cemented and mechanically retained in place by a retainer plate. The body seat ring shall be threaded and screwed into place and the face machined to a smooth finish.

The valve shall have a 4" or 6" flanged end faced and drilled to ANSI 125 pound template for connection to a 4" or 6" wall pipe.

Wall type pressure relief valves shall be furnished by M&H or approved equal.

NOTE:

The 12" long cast iron wall thimble is designed to be extended to any length by using C900 PVC pipe and field cut to desired length.

July 2005 / M&H Pressure Relief Valves—Wall Type

INSTALLATION OPERATION MAINTENANCE **M&H VALVE PRESSURE RELIEF VALVE---WALL TYPE STYLE F-1494-T**

General Inspect all assemblies at time of delivery for shipping damage and to confirm compliance with order. The valve should be protected from rough handling. Water and debris should not be allowed to collect in valve.

I. Installation

- A. Check that valve end joints are clean
- B. Remove any material used to restrain the gate during shipment and storage.
- C. The gate should be checked to insure freedom of motion and proper operation
- D. When handling the valve, do not use the outside mechanism for lifting.
- E. Prepare mounting flange of wall thimble that has been cast into wall tank, as required. Install the valve as per appropriate instructions for the specified joint. Bolts holes should straddle the vertical centerline.

II. Operations

Once installed, the valve will operate as pressure conditions dictate. When outside water pressure builds up, exceeding the inside pressure, the valve will open and allow water to enter the tank to equalize pressure. When the pressure is relieved, the valve will close to prevent seepage of liquid out into the ground.

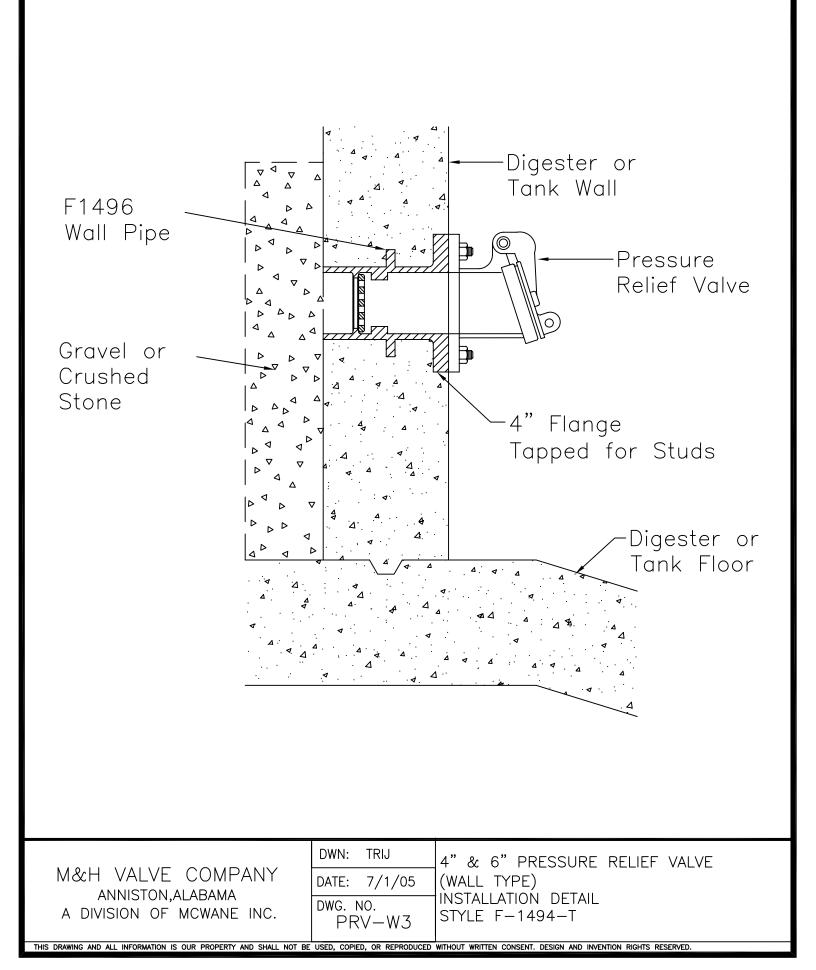

III. Maintenance

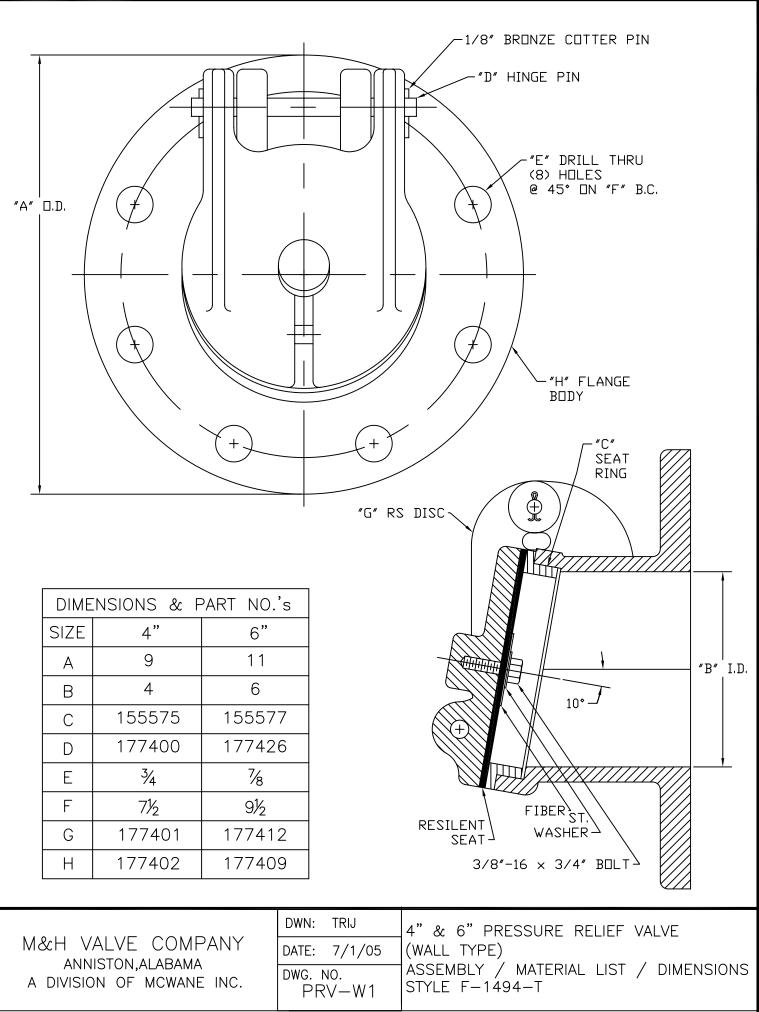

Frequency of inspection should be at least on an annual basis, or whenever valve is accessible. Joint should be visually inspected for leakage. Raise and lower the flap so pin can be checked for free operation. Exercise and lubricate the hinge/shaft pin (* with suitable lubricant) at least annually to assure free operation. Check rubber flap ring and seat ring for freedom from damage. Remove any debris found on inside of valve.

Notes:

There are no recommended spare parts Recommend food grade grease similar to Chevron FM Grease EP NLGI 2.
